

PRESCRIPTION REFILL AND MEDICAL TESTING LOG

Because your medication is an essential part of your treatment, it is important that you keep your prescriptions refilled. You may also be required to have some laboratory tests while you receive treatment. These tests might include a blood or urine analysis. Psychological testing may also be part of your treatment plan. Only your health care provider can determine what is best for you. Use the schedule below to keep track of refills and medical testing appointments.

PRESCRIPTION REFILL LOG
